Professional Summary

B.Tech student in Artificial Intelligence & Robotics and founding technical lead with hands-on project experience in ML model evaluation, ONNX inference, model interpretability, AI-enabled workflow planning, and data processing. Familiar with LLM and agent frameworks, embeddings, and RAG concepts. Seeking Applied AI/ML, Generative AI, or AI Automation internships focused on building practical AI-powered products.

Technical Skills

Programming: Python, JavaScript, TypeScript, SQL, C++
AI/ML: ML/DL fundamentals, model evaluation, ONNX Runtime, class activation maps (CAM), embeddings, RAG concepts
LLM & Agent Tools: LangChain, LangGraph, CrewAI, n8n
Data Processing: Pandas, NumPy, data validation, entity resolution, Jaro–Winkler, FuzzyWuzzy, web scraping
Development Tools: Node.js, React, React Native, Expo, Playwright, Selenium, BeautifulSoup, Git, Jupyter
Other: Leaflet.js, Chart.js, Vite, Tailwind CSS, AWS fundamentals

Experience

YAVORA — CTO / Founding Technical Lead **2026 – Present**
Early-stage B2B SaaS and AI-enabled workflows

- Translated real-estate SaaS requirements into technical specifications and prototype milestones for AI-assisted lead management and WhatsApp/voice workflows.
- Documented proof-of-concept scope and implementation status, distinguishing planned workflows and prototypes from production-deployed functionality.

Urban Garages / WashLink — CTO / Founding Technical Lead **2026 – Present**
Vehicle-care marketplace prototype

- Built a React Native/Expo marketplace prototype with customer and operator portals, reusable UI components, and mock-backed booking workflows.
- Developed a Python data-cleaning and deduplication workflow for 80+ local automotive-service listings to support a geospatial dashboard.

Selected Projects

RetinaGuard — Explainable Diabetic Retinopathy Screening *Computer Vision | ONNX*
GitHub | Live Demo

- Evaluated a ResNet-18 ONNX model for referable diabetic retinopathy (grade ≥ 2) on a 701-image held-out APTOS split: 87.68% sensitivity, 90.41% specificity, 89.30% accuracy, and 0.9623 AUROC.
- Verified Python/Node.js prediction agreement on 699/701 images (99.7%) and integrated class activation map visualizations. Research prototype; not clinically validated or regulator-cleared.

AI-OS — AI Skills, Agents & Workflow Repository *AI Resources | Workflow Organization*
GitHub

- Curated and organized 68,160+ repository resources across 35 domains, including skill files, agent definitions, workflow pipelines, and n8n templates. Resource count represents repository contents, not deployed or operational assets.

CDIOS — Healthcare Data Intelligence System *Data Processing | Geospatial Analytics*
GitHub | Live Dashboard

- Consolidated 3,927 raw listings into 3,694 records through validation and entity resolution. The separate 94% data-trust score is project-defined, not a deduplication or accuracy rate.
- Applied Jaro–Winkler matching, geographic clustering, provider segmentation, and market-sizing analysis; dashboard spans 34 zones and 1,321 localities using Leaflet.js and Chart.js.

Education & Certifications

B.Tech, Artificial Intelligence & Robotics **2023 – 2027**
Gyan Ganga Institute of Technology Sciences

AWS: Machine Learning Foundations, Generative AI Foundations, Cloud Foundations, NLP
Cisco: Python Essentials 1 & 2, Data Analytics | **Oracle:** Database Foundations
CampusX: n8n, CrewAI
