Summary

B.Tech student in Artificial Intelligence & Robotics and founding technical lead with experience building mobile product prototypes, Python data-processing workflows, reusable UI components, and AI-enabled business workflow specifications. Skilled in Python, JavaScript/TypeScript, data handling, and translating product requirements into technical milestones. Seeking Python Developer, Backend Engineering, or Product Engineering internships.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C++
Backend & Integration: Node.js, Workflow Integration, Data Processing, Data Validation, API Concepts
Frontend & Product: React, React Native, Expo, Vite, Tailwind CSS, Reusable UI Components
Python Data Tools: Pandas, NumPy, BeautifulSoup, Selenium, Playwright, Jupyter
Automation & AI Tools: n8n, LangChain, LangGraph, CrewAI
Visualization: Leaflet.js, Chart.js
Development Tools: Git, AWS Fundamentals

Experience

Urban Garages / WashLink 2026 – Present
CTO / Founding Technical Lead *Vehicle-care marketplace prototype*

- Built a React Native/Expo marketplace prototype with customer and operator portals, reusable UI components, and mock-backed booking workflows.
- Implemented customer and operator interfaces for vehicle profiles, booking status timelines, slot-hold interactions, GST/promo calculations, and operator capacity/staff views.
- Developed a Python data-cleaning and deduplication workflow for 80+ local automotive-service listings to support geospatial dashboard functionality.

YAVORA 2026 – Present
CTO / Founding Technical Lead *Early-stage B2B SaaS*

- Translated product requirements into technical specifications and prototype milestones for lead management and AI-assisted WhatsApp/voice workflows.
- Documented proof-of-concept scope, implementation status, and workflow requirements to separate planned functionality from completed prototype work.

Selected Projects

WashLink – Vehicle-Care Booking Marketplace *React Native | TypeScript | Expo*
Customer and Operator Product Prototype

- Built customer/operator flows with a reusable 25-component UI system, vehicle profiles, booking status timelines, slot-hold interfaces, and operator capacity/staff views.
- Implemented GST/promo calculations and OTP verification interfaces; booking and payment-related workflows use mock services rather than live transactions.

CDIOS – Healthcare Data Intelligence System *Python | Pandas | Data Processing*
Data Cleaning, Entity Resolution, Geospatial Analytics

- Consolidated 3,927 raw listings into 3,694 records using data validation and entity resolution; the separately defined project data-trust score was 94%.
- Applied Jaro–Winkler matching, geographic clustering, provider segmentation, and market-sizing analysis; developed a dashboard covering 34 zones and 1,321 localities with Leaflet.js and Chart.js.

RetinaGuard – Explainable Screening Prototype *Python | ONNX Runtime | Model Evaluation*
Inference Validation and Cross-Runtime Testing

- Evaluated a ResNet-18 ONNX model on a 701-image held-out APTOS split, achieving 87.68% sensitivity, 90.41% specificity, 89.30% accuracy, and 0.9623 AUROC.
- Verified Python/Node.js prediction agreement on 699 of 701 images (99.7%) and integrated class activation map visualizations. Research prototype; not clinically validated or regulator-cleared.

Education

Gyan Ganga Institute of Technology Sciences 2023 – 2027
B.Tech in Artificial Intelligence & Robotics

Certifications

AWS: Machine Learning Foundations, Generative AI Foundations, Cloud Foundations, NLP
Cisco: Python Essentials 1 & 2, Data Analytics
Oracle: Database Foundations
CampusX: n8n, CrewAI
